

Installation Guide (Part 1)

Size:120*90*60

Installation Guide (Part 2)

Size:120*90*60

Secure the soft ladder to the base of the cat bed and underneath the jumping platform using 2.5 cm nails

Secure the fence to the side of the shelf using 4 cm nails; fix it from the top of the ladder by passing 4 cm screws through the shelf; at the bottom, use 2.5 cm custom fixings; the bottom does not need to be secured.

For safety reasons, it is best to wear gloves during installation.
Start by using the smallest screw to fit the hinge into the round hole in the door frame.

When installing the door, you can place a piece of cardboard underneath to leave some space for movement at the bottom.

Ensure the mesh door is closed and flush with the doorway, then secure it to the side panel using the smallest screws.

Once both doors have been fitted, if either door is out of alignment, you can adjust the screw in the centre of the hinge, checking the door's position as you go.

Once the door is in the correct position, start by fitting the bottom door stop

Next, fit the top door stop; this can be positioned between the two doors to prevent them from being pushed inwards.

Once the door is closed, secure the latch using the smallest screw

Peel off the adhesive backing from the handle and stick it to the cupboard door

The cupboard is now all fitted
